Azure ML Service Technical Overview

Azure Machine Learning service

https://docs.microsoft.com/en-us/azure/machine-learning/

Building blocks for a Data Science Project

Azure Machine Learning service

Set of Azure Cloud Services

Python SDK & R

That enables you to:

- ✓ Prepare Data
- ✓ Build Models
- ✓ Train Models

- ✓ Manage Models
- √ Track Experiments
- ✓ Deploy Models

Composants Azure ML service

Azure Machine Learning components

Cloud CPU, GPU, FPGA

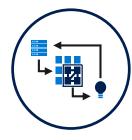

Edge CPU, GPU, NPU

Azure Machine Learning

For all skill levels

Industry leading MLOps

Open & Interoperable

Azure Machine Learning

Industry leading MLOps

Open & Interoperable

Trusted

Access machine learning for all skills and boost productivity.

Rapidly build and deploy machine learning models using tools that meet your needs regardless of skill level. Use the no-code designer to get started with machine learning or use built-in Jupyter notebooks for a code first experience. Accelerate model creation with the automated machine learning UI and access built-in feature engineering, algorithm selection, and hyperparameter sweeping, to develop high accuracy models.

Operationalize at scale with robust MLOps.

MLOps or DevOps for machine learning, streamlines the machine learning lifecycle, from building models to deployment and management. Use ML pipelines to build repeatable workflows and use a rich model registry to track your assets. Manage production workflows at scale using advanced alerts and automation capabilities. Profile, validate and deploy machine learning models anywhere from the cloud to the edge.

Innovate on an open and interoperable platform.

Take advantage of built-in support for popular open-source tools and frameworks for model training and inferencing. Use familiar frameworks like PyTorch, TensorFlow, scikit-learn and more, or the open and interoperable ONNX format. Choose the development tools that best meet your needs, including popular IDEs, Jupyter notebooks and CLIs or languages like Python and R. After you've built and trained your model, use ONNX Runtime to optimize and accelerate inferencing across cloud and edge devices.

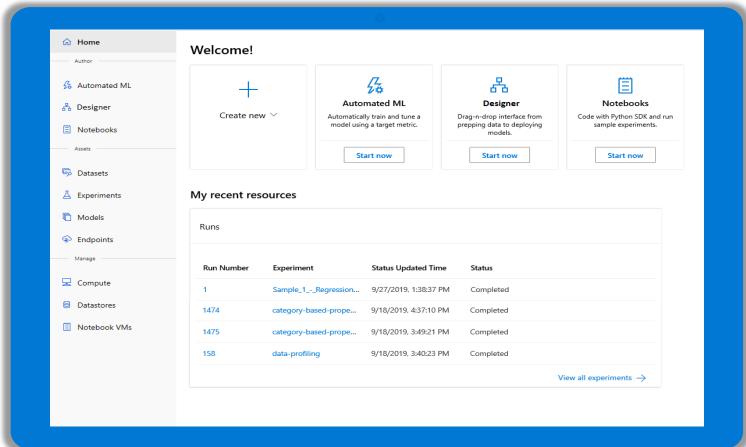

Build responsible AI solutions on a secure trusted platform.

Access state-of-the-art technology for fairness and model transparency. Use model interpretability for explanations about predictions, to better understand model behavior. Reduce model bias by applying common fairness metrics, automatically making comparisons and using recommended mitigations. Enterprise-grade security with role based access control, and virtual network support to protect your assets. Audit trail, quota and cost management capabilities for advanced governance and control.

AutoML

Azure Machine Learning accelerates model development

with automated machine learning

Intelligently test multiple models in parallel

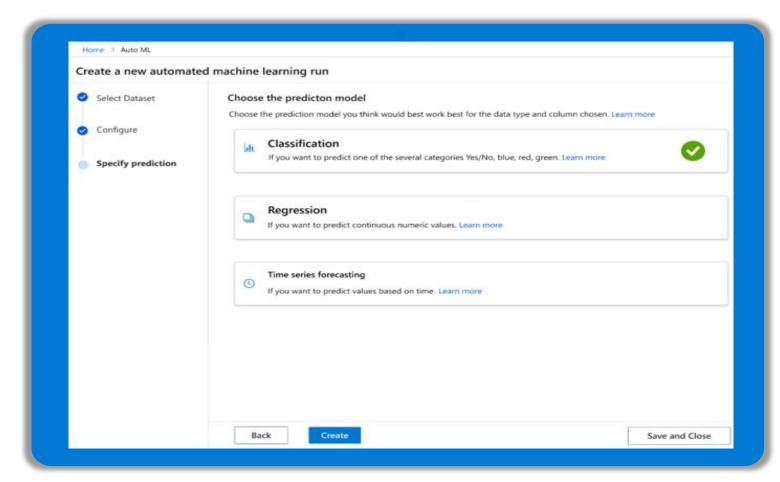

Automated ML

Automatically build and deploy predictive models using the no-code UI or through a code-first notebooks experience.

Increase productivity with easy data exploration and profiling and with intelligent feature engineering.

Easily create accurate models customized to your data and refined by a wide array of algorithms and hyperparameters.

Build responsible AI solutions with model interpretability, and fine-tune your models to improve accuracy.

Automated Machine Learning

What's new

Automated ML UI

New look & feel

Datasets integration: more data sources supported

Featurizer customization

Out-of-the-box model explainability

Automated ML SDK

Deep learning

Text Classification with BERT (GPU) & BiLSTM (CPU)

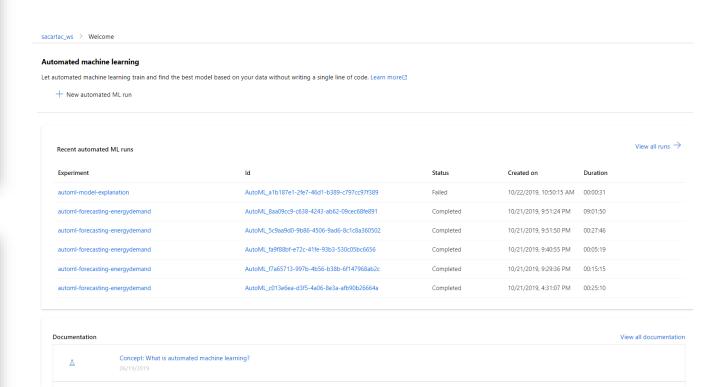

Time series forecasting with ForecastTCN & HyperDrive

Automatic feature engineering

Customizable featurization

Feature transparency: retrieve generated

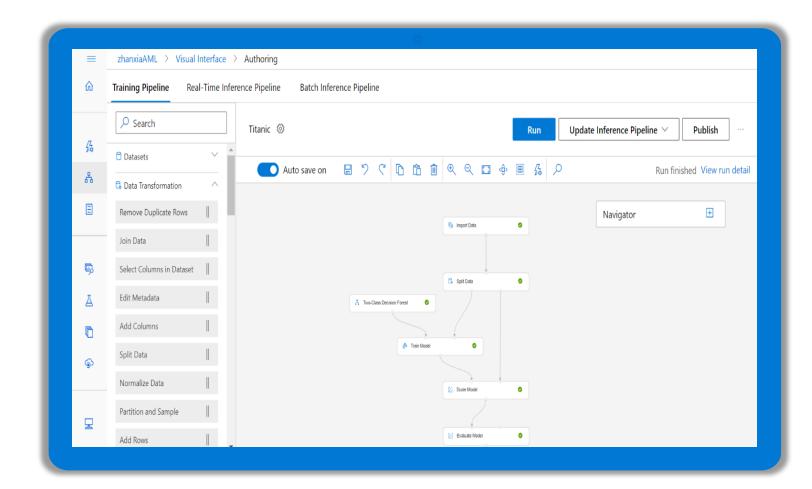

features

Designer

Designer

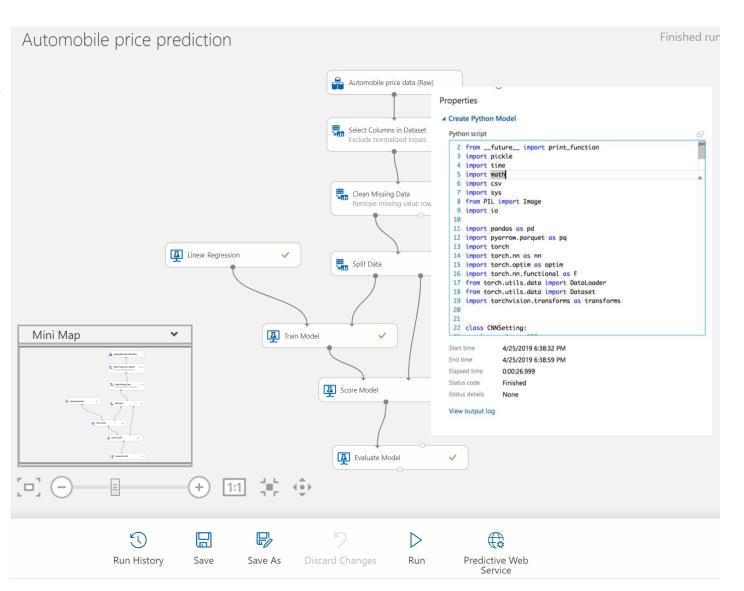

- drag-n-drop workflow capability
- simplify the process of building, testing, and operating machine learning models
- Create new pipelines

Drag and drop modeling with Azure Machine Learning

Designer

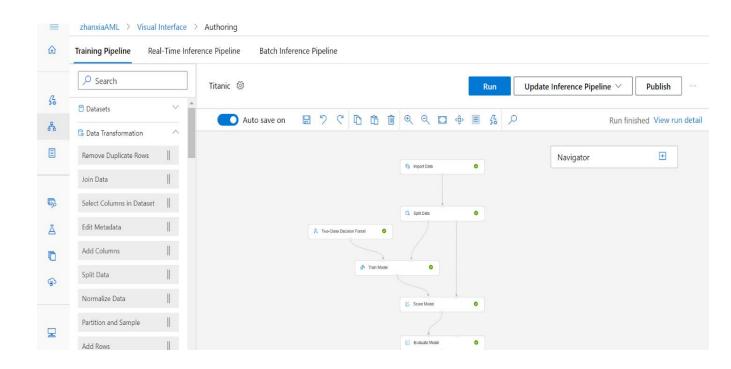

- User built in modules, data visualization, model evaluation
- Automatically generate scoring files, register models and build images using AKS for scale
- Custom code to run Python and R

simplify the process of building,
testing, and operating machine
learning models
Create new pipelines

Machine Learning notebooks

- Fully managed cloud-based solution for data scientists to get started with ML machine learning
- Deeply integrated with Azure ML workspaces and datastores
- first-class experience for model authoring through integrated notebooks using Azure ML Python and R SDK.
- Management and enterprise readiness capabilities for IT administrators.

Machine Learning Notebooks

What's new in compute instance

Productive

Build and deploy models easily using integrated notebooks and popular tools. Collaboratively debug models and share notebooks within the boundaries of workspace.

Preconfigured for ML

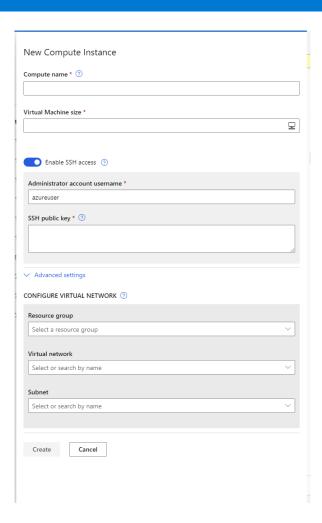

Pre-configured and up-to-date ML packages, GPU drivers and everything Data Scientist needs to save time on setup tasks.

Managed and secure

Managed VM form-factor ensures compliance with enterprise security requirements.

Fully customizable

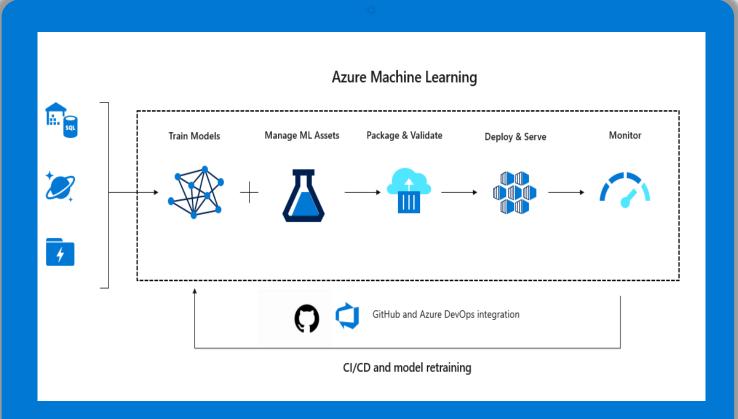

Broad support for Azure VM types and persisted low-level customization makes advanced scenarios a breeze.

Azure Machine Learning service example notebooks

This repository contains example notebooks demonstrating the Azure Machine Learning Python SDK which allows you to build, train, deploy and manage machine learning solutions using Azure. The AML SDK allows you the choice of using local or cloud compute resources, while managing and maintaining the complete data science workflow from the cloud.

Quick installation

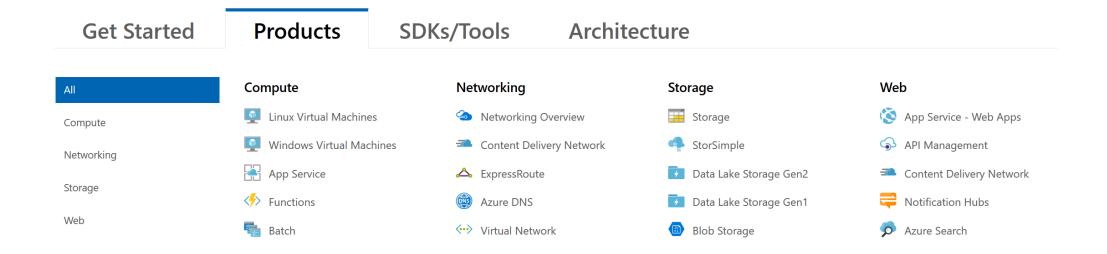

pip install azureml-sdk

Read more detailed instructions on how to set up your environment using Azure Notebook service, your own Jupyter notebook server, or Docker.

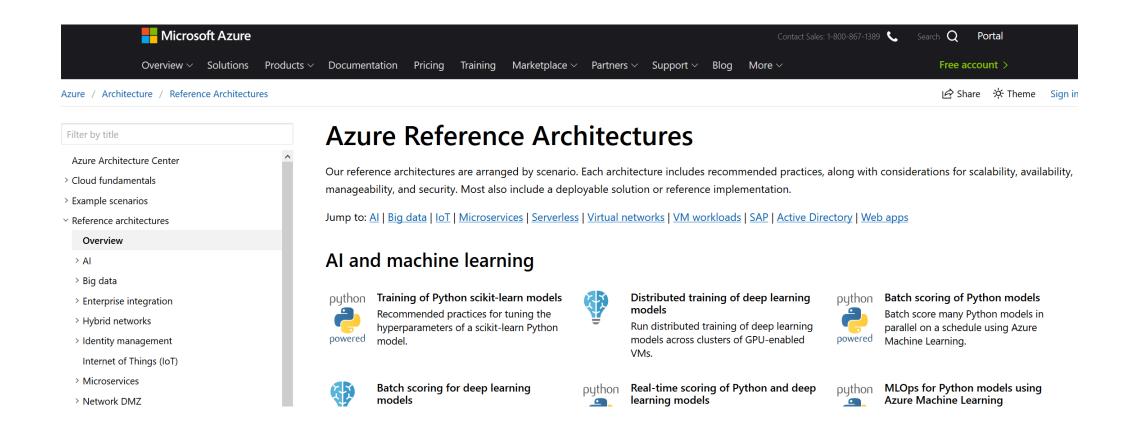

How to navigate and use the example notebooks?

If you are using an Azure Machine Learning Notebook VM, you are all set. Otherwise, you should always run the Configuration notebook first when setting up a notebook library on a new machine or in a new environment. It configures your notebook library to connect to an Azure Machine Learning workspace, and sets up your workspace and compute to be used by many of the other examples.
